

Team Hydrosmart

May 7 2014

"We contacted Hydrosmart 2 years ago to help control algae in our 3 million litre shark lagoon. Micro-Algae would build up in the lagoon so much that viewing of the sharks became almost impossible. Paul recommended an installation that would not be intrusive to the public eye, aiming to alter the ecology of the pond. We saw improvements in water clarity within weeks and an increase in macro algae development which has helped maintain clear water all year round, something which we have not been able to achieve since the initial development of the pond in 1999. We have since ordered more units to clear all the other display aquariums."

If you need anything else, please let me know.

Regards,

Rebecca
