Dear Brian,

after purchasing a Hydrosmart system for my Blueberry farm in Tasmania to combat high sodium, manganese and iron in a bore water supply, which was very detrimental to the plants, I am now extremely happy with the results

No sludge buildup, drippers not blocking up, and the metallic taste in the water has gone, the plants have started to respond well to the clean water.

I would certainly recommend this system to anyone with similar issues.

In fact, I am currently purchasing a second unit to service a second run of irrigation just installed due to expansion of our orchard.

Regards

Grant Carter
