Subject: Test Outcome of Hydrosmart Water Treatment Equipment

To: Managing Director, Water Innovation Company Limited

Whereas the Royal Thai Army Club has received your support in the installation of the Hydrosmart water treatment equipment from Australia at the Club's swimming pools system to test the treatment of issues relating to algae and scale, and the reduction of the use of chemicals, for the safety and health of our members.

The installation of the Hydrosmart equipment has been completed, and the test was commenced from 30 June 2018 until 23 July 2018. We acknowledged the following outcome of the test:

1. The increase in the clarity of the water.
2. The decrease of existing algae, and no new algae was found.
3. The softening of existing scale which can be easily wiped away, and no new scale was found.
4. The ph level of water is neutral, and stable.
5. The reduction of chlorine application by over one-half of the amount previously used.

The Club anticipates that it will shortly reduce the pools cleaning staff. The test will continue for another period to further monitor the treatment.

Please be informed accordingly.

Sincerely yours,

Colonel. -signature-
