

August 2021 Hydrosmart asked :

*Hi Tony,*

*Now the systems been running for a while are you seeing good outcomes and are the smells lowered.*

Tony Galvin (Qld) -

*I finally installed my system today and removed the old magnet before I switched the Hydrosmart system on I ran the bore pump through the lines to get rid of the air. The bore water was really foamy out of the hose into a bucket, switched on the Hydrosmart and run water tractor sprinkler for half an hour, tested back in bucket-no foam and just slightly tainted water now (used to be foul smelling before) Very Happy with it.*

A week or so later -

*Hey Paul, I am over the moon with it. I have been watering for over a week now and before the grass would just stay green and hardly grow and now the wallabies are eating it! No foul water smell in the toilet or handbasin, water is really clear now and not foamy.*

*Absolutely love it.*
