

Hi Hydrosmart.

August 2013

I am going to purchase another Hydrosmart unit to use here in Mataranka in the NT.

We have high lime content in our bore water and lawns especially struggle with it.

I have taken a before photo of the lawn and will send with an after photo once unit is installed.

We have had a unit operating on our bore water in Clare, SA for 3 years now, and we are growing fruit and veg. that simply wouldn't grow without the Hydrosmart.

Our bore water is 2000ppm Total Dissolved Solids. It basically has "lots of everything in it".

Vegies simply curled up and died with all the leaves going brown.

We can now grow the most sensitive of fruit and veg., with a little leaf burn, but still producing a good crop.

Regards, Anthony Heaslip.
