

Feb 2012

To Hydrosmart,

We purchased a Hydromaster 80 mm unit back in 2009 and fitted it to the bore supply that is high in calcium to protect the caravan park amenities and irrigation infrastructure.

I am please with the outcomes as we have had lower scale issues with our water heaters and if there is scale it comes away instead of being baked onto the surfaces.

Water is softer for use in showers and washing of clothes etc and the pipes and surfaces are better off than before.

My brother used treated bore water from the Hydrosmart to wash an old classic truck we have and thought to final rinse it with some rain water and that was a mistake as the truck was dirtier after using the rainwater than when washed with the bore water – that was a surprise.

We are happy recommend it and are planning to put a second unit on the site for even better water improvements, drop in with your van, stay the night for a shower and see what you think.

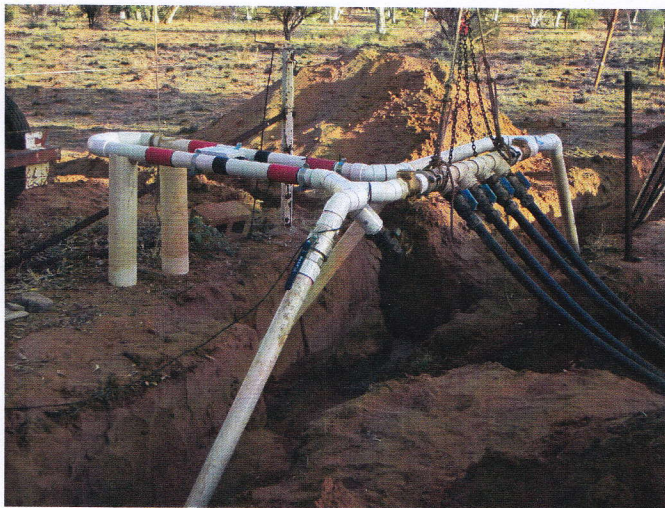

Image shows unit being installed.

Regards

Rod Cramer
