

I bought a hydrosmart in December 2013 in desperation as I was running out of surface water.

I have a bore but the water is awful.

If you pour it on the grass it dies.

My property is in Capertee Valley and when I read the Suntec Hydroponic Report using Capertee Valley bore water it tipped me into trying it.

I had also knew of a user who had one some 17 years ago.

It works!

I have now assured stock and domestic water supply.

I have never been in the situation and am adjusting.

The water can go out on to grass and flowers and it grows. The water will now lather soap. i no longer see salt rings in the dam I used to pump bore water into.

Now my surface water is a back up... amazing.
