

To Hydrosmart

3 units solving 3 different water problems

ONE : 6 years ago we purchased a unit for the mains water in Adelaide and it worked as we enjoy the less smelly shower and baths and having softer water than we used to have before.

TWO : We had a bore that was 1,800 ppm and needed to deal with salts so on went another bigger one and that stopped the plants and lawns from struggling like they were when watering without it so that had built our trust enough to then get another one of your units.

THREE : Last year when doing a new 50,000 litre pool we wanted a natural pool or a low chemical use one and on calling your office, you guys said your new poolmaster worked to lower chemicals in the water by stabilizing pH and making lower need of chlorine addition without normal pool pong. It seemed hard to believe however we put one on the return line to the pool and one on the solar heater as suggested and had a very clear clean stable pool all summer and used very low amounts of chlorine (used an auto doser set at 1 ppm) with no water odours or eye, skin dryness that you get from many backyard pools.

Well done, your technology has solved three water issues at our home and I recommend it to those considering a long term smart water technology.
