

Hydrosmart International

Parkside SA 5063

7 November 2007

We have a bore on our property in South Australia between Balaklava and Pt. Wakefield which was too salty to use with levels around 6,500 ppm TDS. Our olive grove has 500 trees which we were using mains supply water to irrigate with before.

In 2003 we purchased a Hydrosmart 40 mm Digital unit to put on the bore water and irrigated with only the treated water.

Our olive trees have grown at an incredible rate and are all very healthy now after four years of solid use of this water so far. We thank you for the outcomes and would recommend it to anyone considering treating salty water to grow olives with as we are sure they helped to produce great tasting olives as well.

Regards
