13 December 2004

Dear Paul

I was checking the Hydrosmart system this year and thought I would let you know how things are traveling. It has now been four years since installing the unit and I've seen some great results these past years.

I noticed that I use less water since having the Hydrosmart on and as a result of supplying better water to my vineyard, I see several good results such as having no leaf burn, a more balanced canopy and a good result with the sugar levels.

After flowering I had taken a petiole test to see the nutrient levels and was surprised to see the sodium level had fallen from a high reading two years ago down to low this year, which as you know was most surprising given the past outcomes, I look forward to comparing them to next seasons.

I am most delighted in the dripper systems condition which I originally bought the unit for, it has kept the system clean these last years with no calcium buildup in my pipes, gates valves, filters and drippers. I must tell you Paul that I have had no blockages since installing the unit. This is saved me both money, time and labour and I am very happy with the unit.

I would like you to visit the vineyard at some stage to check the system and see the results on both the drippers and the water quality.

Thank you for your time.

Best Regards
Tony Pollifrone
